Setting Up Heroku

- FIRST you want to sign up to heroku.com
- we then go to settings and on the bottom should be a ssh key section, that is where we are going to put our SSH
- to figure out our SSH key go to you terminal
- copy what this generates to the text field in heroku ssh key
- to close this tab just type Q

```
less ~/.ssh/id_rsa.pub
```

- we then want to get the heroku toolbelt at <https://devcenter.heroku.com/articles/heroku-cli>
- install the MacOS installer
- now over in our terminal, lets login to heroku

```
joses-MacBook-Pro:short-lnk mendoza$ heroku login
```

- **it will** ask for email and password
