Common Developer Workflow

- lets go change something from our code in short-lnk
- go to Login.js and change the following, just one line

```
render(){  
  return (  
    <div className = "boxed-view">  
      <div className = "boxed-view__box">  
        <h1>Short Lnk Login</h1>  
  
        {this.state.error ? <p>{this.state.error}</p>: undefined}  
  
        <form onSubmit={this.onSubmit.bind(this)} noValidate className="boxed-view__  
form">  
          <input type="email" ref="email" name="email" placeholder="Email"/>  
          <input type="password" ref="password" name="password"  
placeholder="Password"/>  
          <button className="button">Login</button>  
        </form>  
  
        <Link to="/signup">Need an account?</Link>  
      </div>  
    </div>  
  );  
}
```

- lets go to our terminal and git status
