Styling filters and page content

- go to Link.js and a div to wrap the last 3 components

```
import React from 'react';

import LinksList from './LinksList';
import PrivateHeader from './PrivateHeader';
import AddLink from './AddLink';
import LinksListFilters from './LinksListFilters'

export default () => {
  return (
    <div>
      <PrivateHeader title="Your Links"/>
      <div>
        <LinksListFilters/>
        <AddLink/>
        <LinksList/>
      </div>
    </div>
  );
}
```

- lets add a new className to this div

```
import React from 'react';

import LinksList from './LinksList';
import PrivateHeader from './PrivateHeader';
import AddLink from './AddLink';
import LinksListFilters from './LinksListFilters'

export default () => {
  return (
```

```

    <div>
      <PrivateHeader title="Your Links"/>
      <div className="page-content">
        <LinksListFilters/>
        <AddLink/>
        <LinksList/>
      </div>
    </div>
  );
}

```

- now lets create a partial in styles/components called _page-content.scss
- lets import it to our _main.scss

```

@import './variables';
@import './base';
@import './components/boxed-view';
@import './components/button';
@import './components/header';
@import './components/page-content';

```

- **let** now go to our partial _page-content.scss and add some style

```

.page-content {
  max-width: $site-max-width;
  margin: 0 auto;
  padding: $space;
}

```

- lets create a new file on styles/components called _checkbox.scss
- lets import this file in our _main.scss

```

@import './variables';
@import './base';
@import './components/boxed-view';
@import './components/button';
@import './components/header';

```

```
@import './components/page-content';
```

```
@import './components/checkbox';
```

- **now lets go** to LinksListFilters.js to add our new class and class selector in the .checkbox

```
render(){
  return (
    <div>
      <label className="checkbox">
        <input className="checkbox__box" type="checkbox" checked={!this.state.showVisible} onChange={(e)=>{
          console.log(e.target.checked);
          Session.set('showVisible', !e.target.checked);
        }}/>
        show hidden links
      </label>
    </div>
  );
}
```

- now go back to _checkbox.scss and start adding our styles
- if you notice the \$space/2 is because the margin was too wide, and for this occasion we don't want it that wide, so all we have to is divide it by two, we can do this sass

```
.checkbox {
  display: block;
  margin-bottom: $space;
}

.checkbox__box {
  margin-right: $space / 2;
}
```

-
