40-short-lnk [video](#)

Adding react-flip-move

- lets install this feature in our terminal

```
joses-MacBook-Pro:short-lnk mendoza$ meteor npm install react-flip-move@2.7.4 --save
```

- **now** lets go to LinksList.js and import this

```javascript
import React from 'react';

import { Meteor } from 'meteor/meteor';

import { Tracker } from 'meteor/tracker';

import { Session } from 'meteor/session';

import  FlipMove  from 'react-flip-move'

import { Links } from '../api/links'

import LinksListItem from './LinksListItem';
```

- and lets make an instance of FlipMove down below, notice that it takes one parameter

```javascript
    render(){

        return (

            <div>

                <div>

                    <FlipMove maintainContainerHeight={true}>

                        {this.renderLinksListItems()}

                    </FlipMove>

                </div>

            </div>

        );

    }

}
```

- and last lets add the viewport meta tag over in main.html

```
<head>

  <title>Short Lnk</title>

  <meta name="viewport" content="width=device-width, initial-scale=1"/>

</head>

<body>

  <div id="app"></div>

</body>
```

-
